NOTIFICATION DATE

DELIVERY MODE

02/27/2008

ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

PTO-Legal.PRC@usa.dupont.com

Office Action Summary	Application No. 10/719,973	Applicant(s) LAHIJANI, JACOB	
	Examiner ROBERT VETERE	Art Unit 1792	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 November 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 2,4,6,8,9 and 12-28 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 2,4,6,8,9,12-28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Examiner's Comments

An amendment was received on 11/27/2007, cancelling claims 1, 3, 5, 7, and 10-11 and adding new claims 22-28. This amendment has been entered into the record and considered in this action.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 6, 12, 14-18 and 19-27 rejected under 35 U.S.C. 103(a) as being unpatentable over Kazumi (JP 02-904593) in light of Buckmaster (US 4,714,756, hereinafter "Buckmaster '756").

Claims 6, 19-23 and 26-27: Kazumi teaches a method of rotolining the interior of a hollow article comprising:

adding a composition consisting essentially of tetrafluoroethylene/perfluoro(alkyl vinyl ether) copolymer ("PFA") (¶ 0016) and non-bubble promoting (¶ 0007) metal powder (¶¶ 0016-0017) to the interior of said article;

rotating said article to distribute the composition over said interior surface (¶ 0015);

heating said article to melt the copolymer particles and then cooling said article (¶ 0020).

What Kazumi does not teach is that the PFA is fluorine treatment stabilized. Buckmaster '756 teaches a method of preparing melt-processible tetrafluoroethylene perfluoro (alkyl vinyl ether) copolymer (abst.) to be used in rotomolding applications to make linings (Col. 1: 12-15). Buckmaster '756 further teaches that this PFA copolymer is treated with fluorine to stabilize the copolymer to reducing bubbling of the PFA during heat-processing (2: 33-38). This is desirable because stabilized PFA copolymers are easier to handle in conventional melt-fabrication processes (1:34-40) and because it reduces bubbling (2:33-38). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the fluorine stabilized PFA of Buckmaster '756 in the method of

Art Unit: 1792

Kazumi to further reduce bubbling and also to provide a PFA which is easier to handle in the rotolining process of Kazumi.

Kazumi also discloses that the metal powder constitutes 0.1 to 30 wt% of said composition. With respect to applicant's limitation of 0.3 to 1.2 wt%, in the case where the claimed ranges "overlap or lie inside ranges disclosed by the prior art" a prima facie case of obviousness exists. *In re Wertheim*, 191 USPQ 90 (CCPA 1976). Furthermore, Kazumi teaches that the exact percentage used can affect the metal powders usefulness in preventing bubbling and it has been held that "where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." *In re Aller*, 105 USPQ 233, 235 (CCPA 1955). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have selected and/or optimized the wt% of metal powder used, as taught by Kazumi, in order to have increased the metal powder's usefulness in preventing bubbling of the PFA.

Kazumi and Buckmaster '756 fail to explicitly teach that the stabilized PFA with metal powder promotes adhesion and that said adhesion is characterized by a peel strength of at least about 25 lb/in. However, while these references do not explicitly teach this limitation, the types of additives disclosed by Kazumi are the same as the additives used by applicant and are used in the same proportion as recommended by applicant (see ¶¶ 0016, 0018 and pp. 4-5 of Applicant's specification). Furthermore, Kazumi does explicitly disclose the desire to create a lining that adheres to the inner surface of target to be coated (see ¶¶ 0003 and 0005).

Claims 12 and 14: Kazumi also teaches that the metal powder is zinc and/or contains copper (¶ 0016).

Claims 15-16: Kazumi also teaches that the metal powder is, for example, zinc or a fine powder containing copper (see ¶ 0016). It does not teach that the additive is a combination of metals. However, "it is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose.... [T]he idea of combining them flows logically from their having been individually taught in the prior art." *In Re Kerkhoven*, 205 USPQ 1069, 1072 (CCPA 1980). Thus, it would have been obvious to one of ordinary

Art Unit: 1792

skill in the art at the time the invention was made to have used a combination of metals (including brass, which is a combination of copper and zinc) as the additive powder in Kazumi.

Claims 17-18: Buckmaster '756 also teaches that the stabilized PFA has less than 80 unstable end groups per 10^6 carbon atoms in the polymer and that the unstable end groups are, for example, $-\text{COOH}$, $-\text{CH}_2\text{OH}$, and $-\text{CF}=\text{CF}_2$ (4:21-45).

Claims 24-25: Kazumi teaches all the limitations of claims 24 and 25 in light of Buckmaster '756, as discussed above, but does not teach that the copolymer used is tetrafluoroethylene/perfluoro(methyl vinyl ether)/perfluoro(propyl vinyl ether) ("TFE/PMVE/PPVE") rather than PFA. Buckmaster '756, on the other hand teaches that perfluoro(methyl vinyl ether) and perfluoro(propyl vinyl ether) are known copolymers with tetrafluoroethylene that can be used in melt-processible copolymer compositions (2:49-53). Furthermore, the selection of a known material based on its suitability for its intended use supported a prima facie obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 65 USPQ 297 (1945). Thus, it would have been obvious to one of ordinary skill in the art to have used TFE/PMVE/PPVE in place of PFA in the method of Kazumi and Buckmaster '756 with the predictable expectation of success because PMVE/PPVE are recognized copolymers of TFE known to be suitable for this application.

2. Claims 2, 4, 8-9, 13, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kazumi in light of Buckmaster '756 and further in light of Saito et al. (US 5,397,831).

Claims 2, 4, 8-9 and 28: Kazumi teaches all the limitations of claims 6 in light of Buckmaster '756, as discussed above. What these references do not explicitly teach is the thickness of the overcoat. Saito, however, teaches a method of rotolining (Col. 2, lines 64-68) an article with PFA (2:64-68) creating a layer which is free of bubbles (2:64-68). It also teaches that it is common to use rotolining to generate a thick film of 5mm (1:58-68). Given this fact and the fact that the thickness of the undercoat in Kazumi was 2 mm, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have increased the thickness of the overcoat in Kazumi to a value as high as 3 mm with a reasonable expectation of success because layers as thick as 5 mm are common in the art of rotolining with bubble free PFA, as taught by Saito.

Art Unit: 1792

Claim 13: Kazumi teaches all the limitations of claim 6 in light of Buckmaster '756, as discussed above. What it does not teach is that the metal powder is tin. Saito, however, teaches that the use of tin as a metal additive is well known in the art of rotolining bubble-free PFA (2:43-56). Furthermore, the selection of a known material based on its suitability for its intended use is *prima facie* obvious. *Sinclair & Carroll Co. v. Interchemical Corp.*, 65 USPQ 297 (1945). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used a metal powder containing tin in the process of Kazumi because it is recognized as a metal powder which will prevent bubbling of PFA during a rotolining process, as taught by Saito.

Response to Arguments

In light of the amendments to these claims, the double patenting rejection of claims 6 and 17 is withdrawn.

Applicant's arguments filed 11/27/2007 have been fully considered but they are not persuasive.

Applicant first argues that Kazumi fails to teach a fluorine stabilized copolymer. However, applicant's argument that the reference does not teach the newly added limitations is unconvincing in view of newly-cited Buckmaster '756, as discussed above.

Applicant next argues that Kazumi will not obtain adhesion because it is silent on adhesion. This is not persuasive because, in ¶ 0003, Kazumi recognizes that adhesion is a problem in the prior and subsequently, in ¶ 0005, declares that their invention was create in light of this, and other, problems. Thus, Kazumi is not silent on adhesion.

Applicant further argues that Kazumi will not obtain adhesion because it teaches a range of wt percentages and metal additives. Nonetheless, Kazumi does teach the same additive and same percentage that applicant claims gives their copolymer composition better adhesion. Thus, it is inherent that the copolymer composition taught by Kazumi in light of Buckmaster '756 will promote adhesion. Also, in regards to applicants argument that inherency is inappropriate in a § 103 rejection, MPEP § 2112 states that "[t]he express, implicit, and inherent disclosures of a prior art reference may be relied upon in the rejection of claims under 35 U.S.C. 102 or 103."

Art Unit: 1792

Applicant also argues that claims 24 and 25 directed to MFA are novel over Kazumi. However, applicant's argument that the reference does not teach the newly added limitations is unconvincing in view of newly-cited Buckmaster '756, as discussed above.

Applicant also argues that the subject matter of claim 23 recites a mixture which is considered unsuitable by Saito. This is not persuasive because Saito is merely cited as showing common thicknesses that can be generated with rotolining processes. The fact that the mixture of Kazumi and Buckmaster would be inappropriate for the end use of Saito is not material.

Applicant also argues that claim 28 directed to a thick overcoat is novel in light of the prior art cite in this action. This, however, is not persuasive because, as stated above, Saito teaches that layers of 5 mm are known in the art.

Applicant further argues that Saito teaches away from the use of tin as an additive. This is not persuasive. Saito teaches that it is known in the art to utilize tin to solve PFA bubbling (2:43-46). What Saito teaches away from, however, is the use of zinc, not tin (2:49-53).

Applicant further argues that Buckmaster '409 teaches that fluorine treatments are undesirable. However, Buckmaster '409 has been removed from this rejection and replaced with Buckmaster '756 which teaches the desirability of these treatments.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
